

Book Pandit Project Documentation

1. Introduction

Book Pandit is an online platform for booking verified pandits for religious ceremonies and events. It streamlines the process of finding, booking, and paying for pandit services, making religious rituals more accessible and convenient.

2. Architecture Overview

- Frontend: Static HTML, CSS, and JavaScript files located in the frontend directory. Pages include home, about, services, contact, authentication, and dashboards.
- Backend: Django-based REST API in bookpandit_django. Handles bookings, payments, user management, and serves API endpoints for frontend consumption.
- Database: SQLite (default for Django), can be swapped for PostgreSQL or MySQL in production.
